See What Everyone is Saying About
AEL's AirLogic Posture Supports

"The fabric technology in the AirLogic has allowed for temperature sensitive patients to have **increased seating tolerance through reduced body temperature**...The mesh fabric allows for rapid drying of moisture when excessive mouth secretions are inevitable."

Jon, WI (ATP)

"I love the new AirLogic!
Soft, breathable fabric,
attractive design, and we
love the nicely sewn and
durable zipper
assembly."

Phil, WI (ATP, CRTS)

"I really like the
aesthetics of the
AirLogic. It's important
since it's one of the first
things you will see if a
person is wearing a chest
support... I have been
impressed with the
combined

breathability and
durability. Most times, as
an ATP, one will have to
sacrifice one or the other
when choosing a chest
support. You are able to
get both with the
AirLogic."

Jim, MO (ATP, OTR/L)

"The seamanship
provides a **high**
quality durable harness
that will last. And parents
are pleased that they can
machine wash the
AirLogic instead of hand
washing it."

Andy, VA (ATP)

"The OTs and PTs like the way it clasps. It's very simple to lock and unlock. We think that it is **great for our spinal cord injury and brain injury patients**...It seems to give them enough trunk support to stabilize even a high level spinal cord injury patient in the chair without movement. It seems very comfortable to the patients and is **easy to adjust the tightness while wearing it.**"

Anne, MO (MPT)

"The AirLogic gives excellent support and has great breathability and **moisture control** for this Louisiana heat."

Kristin, LA (ATP)

"The therapists like the way it looks and the breathable material gives the patients a much **higher comfort level.**"

Jeff, GA (ATP)

"A neoprene harness would come undone, the fabric would fail; but the AirLogic holds up really well and has a **greater durability.**"

Steve, MI (ATP)

"The flexibility of having the movement with the bottom swivel side release buckles benefits the patients. We have had **absolutely no complaints** and will continue to use it."

Doug, VA (RTS)

"I have made sure to introduce the AirLogic not only to my new clients, but also to those who use the old style as well. My clients frequently rely on my recommendations, and I find that the AirLogic chest harness is a recommendation I can make without reservation. The AirLogic's breathability and moisture-wicking properties are ideal for patient comfort, and are also what make the harness **superior to the competitors.** I also believe this harness has a cosmetic appeal that most other harnesses lack."

Rich, CO (ATP)
